Darren specialises in advising businesses on both proactive and reactive uses of technology in the areas of cybersecurity, privacy, digital forensics and technology-led investigations.

Darren is a highly respected, qualified investigator and forensic technology expert with more than 31 years of specialist forensic experience and more than five years as a foundation member of the Forensic Computer Examination Unit with the Queensland Police. Held in high regard by attorneys and the courts, he has undertaken complex computer forensic examinations for both criminal and civil litigation in Australia and overseas.

He works regularly with boards, executives and senior business leaders in organisations of every size to consider and set technology strategies for cyber, privacy, data protection and information risk management. His extensive experience spans across a wide range of industries, including business services, construction, entertainment, financial services, government, healthcare, insurance, leisure, manufacturing, retail and technology.

Darren has assisted organisations respond to cyber incidents including complex ransomware attacks. In addition to supporting the containment, response and recovery from cyber incidents, Darren helps organisations build cyber strategies and plans to improve their cyber resilience.

He also regularly applies his digital forensic and investigative expertise to help resolve time-critical and highly sensitive issues as they arise. These matters range from large-scale data breaches or theft, through to employee misconduct or intellectual property matters.

Engagement Experience —

- Expert before the International Centre for Settlement of Investment Disputes (ICSID) representing the Democratic Republic of Timor-Leste. The dispute originated in a Fuel Supply Agreement (FSA) comprising three interrelated agreements entered into in October and November 2010.
- Assisted a Queensland Government Department investigate a Cyber breach of a hosted cloud service. The work involved analysis of various forms of digital evidence using analytics and forensic processes. We provided various forms of reporting including a report which was used by the Queensland Government CIO and a report which provided the executive with recommendations in relation to cyber resilience and security.
- Assisted a large Australian Superannuation client to establish a Master Services Agreement with McGrathNicol, where our team now act as a regular contributor to their National program of cyber security and data protection education and awareness across all levels of their business. The
